W2-PM2 — GHDB Reconnaissance

NetworkWalks Cybersecurity Internship | Batch B084
Taha Chebil | November 2026

Objective

Learn how Google dorks and publicly indexed resources can reveal online camera listings and downloadable mathematics PDF documents. Record the discovery method and understand the difference between a search result, intentional publication, and a verified security exposure.

Task 1 — Find 10 camera listings

Original assignment: 10 live, vulnerable and exposed security camera links with relevant dorks and credentials (if any). The table below documents 10 findings, but does not establish vulnerability or permission to view. Unverified camera addresses are withheld from this shareable report.

No.	Link / camera listing	Relevant dork / method	Username / Password
1	Road intersection / parking (URL withheld)	GitHub direct link	Not collected
2	Outdoor courtyard (URL withheld)	GitHub direct link	Not collected
3	Animal enclosure (URL withheld)	Camera directory direct link	Not collected
4	Residential exterior (URL withheld)	Camera directory direct link	Not collected
5	Indoor entrance (URL withheld)	Camera directory direct link	Not collected
6	Industrial exterior (URL withheld)	Camera directory direct link	Not collected
7	skylinewebcams.com — Madrid Puerta del Sol	site:skylinewebcams.com "live webcam"	Not collected
8	City panorama (URL withheld)	intitle:"webcamXP" inurl:8080	Not collected
9	Residential interior (URL withheld)	intitle:"webcamXP" inurl:8080	Not collected
10	Indoor radio studio (URL withheld)	intitle:"webcamXP" inurl:8080	Not collected

Task 1 note: One listing was identified on an intentionally public webcam platform. Other camera endpoints were not verified as authorized public demonstrations. No credentials were collected, and no vulnerability is claimed.

Task 2 — Find 10 downloadable mathematics PDF listings

Original assignment: 10 listings containing downloadable mathematics ebooks in PDF format. Some findings are lecture notes or editions of the same book; they are recorded as PDF listings rather than ten distinct ebooks.

No.	PDF title / source link	Relevant dork	Username / Password
1	A Computational Introduction to Number Theory and Algebra ochicken.net/library/Mathematics/Abstract_Algebra/	Dork 1	N/A
2	Advanced Modern Algebra, Part 1 — J. Rotman ochicken.net/library/Mathematics/Abstract_Algebra/	Dork 1	N/A
3	Polynomial Algorithms in Computer Algebra — F. Winkler ochicken.net/library/Mathematics/Abstract_Algebra/	Dork 1	N/A
4	Statistical Inference — Casella & Berger ochicken.net/library/Mathematics/Probability_Theory/	Dork 1	N/A
5	Mathematics for Computer Science (2015) ocw.mit.edu/.../mit6_042js15_textbook.pdf	Dork 2	N/A

No.	PDF title / source link	Relevant dork	Username / Password
6	Mathematics for Computer Science (2018) courses.csail.mit.edu/6.042/spring18/mcs.pdf	Dork 2	N/A
7	Mathematics lecture notes — Cornell pi.math.cornell.edu/~jerison/math6710/notes.pdf	Dork 3	N/A
8	Probability lecture notes — Stanford web.stanford.edu/~montanar/.../amir_notes.pdf	Dork 3	N/A
9	Mathematics course notes — Harvard people.math.harvard.edu/~ctm/.../course.pdf	Dork 3	N/A
10	Mathematics lecture notes — UC Davis math.ucdavis.edu/~gravner/.../lecturenotes.pdf	Dork 3	N/A

Google dorks used

Dork 1: intitle:index.of "parent directory" mathematics pdf

Dork 2: site:mit.edu filetype:pdf mathematics

Dork 3: site:edu filetype:pdf "probability theory" lecture notes

New lessons learned

• Google dorking: combining advanced search operators to locate indexed resources.
• Directory listing: an exposed file index can reveal documents stored on a server.
• Search operators: intitle: filters page titles; site: limits domains; filetype: filters file formats; quotation marks match exact phrases.
• OSINT: public search results can support reconnaissance without scanning target systems.
• Security interpretation: publicly indexed does not necessarily mean vulnerable or unauthorized.
• Responsible reporting: do not collect credentials or republish unverified private camera addresses.

Challenges and conclusion

Challenge: The official GHDB website returned HTTP 502, so Google searches and other public references were used instead. Result: 10 camera listings and 10 mathematics PDF listings documented. PDF links and licensing were not independently verified; the camera listings do not prove ten vulnerabilities.
